Using Technology to Make Driving Safer

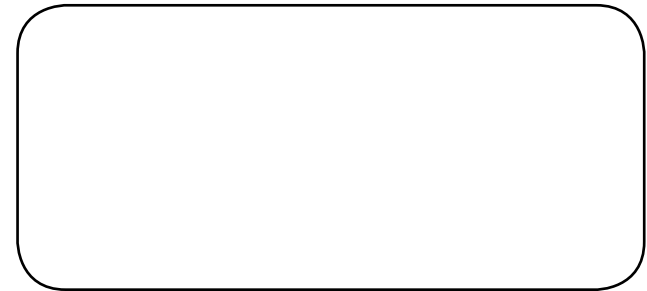

Today's drivers are more safety conscious than ever. With the popularity of SUVs, trucks, and larger vehicles, blind areas behind vehicles are an increasing problem. According to a recent survey, over one-fourth of all automotive accidents occur when a vehicle is in reverse.

Sophisticated video technology now makes it affordable for drivers to have an added dimension of safety. A RearSight® Camera System makes backing up easier and less prone to accidents.

REARSIGHT®

RearSight's® interior camera system offers drivers a way to see into the back seat without having to take their eyes off the road. This is especially important to parents with young children traveling in the back.

Nearly every kind of vehicle can benefit from a RearSight Camera System. And with the many systems and options Rostra offers, RearSight® is sure to be one of the most desirable safety products in the aftermarket.
